	<p>Sweet potato belongs to the family of the convolvulaceae, it is a perennial herbaceous plant, with tuberous roots, which present a great variation in the colour of the pulp and the peel. The adventitious roots can reach a depth of up to 1.20 m. Some of these roots thicken and develop to a length of 30 cm and a thickness of 20 cm. The stem is creeping, with simple leaves of 6 to 15 cm in its wide part with a whole leaf blade, green, reddish and purplish veins. Flowers grouped in inflorescences. The calyx has two outer and three inner sepals. The fruit is a rounded capsule 3 to 7 mms in diameter. Each capsule has up to 4 irregularly shaped black seeds.</p>
