

DATA SHEET: FRESH YELLOW PASSION FRUIT

Revision Date: 01-07-2022 RGSi No: 40.088364/BA ECO No: ECO: ES-ECO-021-EX. 781/IC	Product: Passion fruit	Variety: Yellow	Departure: 0810.90.10.00
--	---------------------------	--------------------	-----------------------------

Passionflower is a climbing vine; it can reach up to 9 metres in length in favourable climatic conditions, although its life span does not generally exceed a decade. Its stem is rigid and woody; it has large, smooth, dark green, alternate leaves. The same plant may have non-lobed leaves when it starts to develop. The roots, as is usual in climbers, are superficial. The fruit of the passionflower is an oval or round berry, between 4 and 10 cm in diameter, fibrous and juicy, covered with a thick, waxy, delicate and inedible shell.
